About Me

Highly experienced DevOps/SRE Engineer with over 10 years specializing in designing and managing resilient, high-scale cloud infrastructure on AWS and Kubernetes. Expert in Infrastructure as Code (Terraform, Ansible) and robust pipeline automation. Proven ability to enhance security posture using tools like AWS GuardDuty and Nessus, driving significant improvements in system availability, efficiency, and compliance across large-scale Linux environments.

Skills

- **Cloud/Infra:** AWS (VPC, EC2, S3, IAM, RDS), Azure, Kubernetes, Docker.
- **Databases:** PostgreSQL, MySQL, Redis (Caching)
- **CI/CD & DevOps:** Git, GitHub Actions, Jenkins, Monitoring (e.g., Zabbix, ELK).
- **Infrastructure as Code (IaC):** Terraform, Ansible.
- **Security and Compliance:** AWS GuardDuty, AWS Security Hub, AWS Config, AWS WAF, Nessus, Vulnerability Management.
- **Programming languages:** Python, Shell Scripting.
- **Soft skills:** Technical Communication, Ownership and Accountability, Systematic Learning.

Professional Experience

DevOps Engineer Neota	01/2023 to Current London
• Drove a 50% reduction in ITSM vendor support costs by taking ownership of internal IT management, administering Microsoft 365 and Intune for all office users and devices. • Engineered and deployed a centralized, cross-cloud monitoring platform (Zabbix) spanning both AWS and Azure infrastructure, resulting in a 40% increase in infrastructure visibility and proactive fault detection. • Identified and executed a comprehensive cost optimization initiative across the multi-cloud environment that drove a >98% reduction in monthly cloud expenditure. The core solution, which included rerouting database backups from high-cost AWS EFS to optimized EBS storage, resulted in an estimated \$19,000+ in annualized savings for the organization. • Led vulnerability management and security compliance by performing regular scanning (using Nessus) and collaborating with development teams to prioritize and remediate critical risks in production environments. • Administer and provision multi-cloud resources across AWS and Azure, leveraging Terraform and Ansible to automate resource lifecycle management and ensure consistent, auditable infrastructure configuration. • Streamlined system stability by coordinating critical patch updates and maintenance windows, ensuring production stability and 99.9% uptime across key client-facing applications.	
DevOps Engineer Tiger IT Bangladesh Limited	11/2019 to 02/2021 Dhaka
• Engineered and maintained the core system infrastructure for the national Biometric Residence Card project, supporting a critical government application scaled to handle millions of citizen records and continuous high-volume throughput. • Established a robust data streaming architecture using Apache Kafka clusters to process high-volume, real-time data ingestion for downstream services, ensuring data durability and low-latency delivery. • Implemented end-to-end infrastructure automation and configuration management for the on-premises data center, leveraging Ansible to significantly reduce deployment time by 60% and ensure infrastructure consistency across development and production environments. • Designed and managed a centralized logging and monitoring solution leveraging the ELK Stack (Elasticsearch, Logstash, Kibana), providing developers and operations teams with real-time insight into application performance and stability.	

- **Administered and optimized object storage (Minio) and relational database (Postgres)** within the on-premises data center, ensuring **99.99% data availability** and high-performance access for all system components.
- **Conducted technical R&D and proof-of-concept testing** on various open-source tools to provide the development team with modern, scalable solutions.

Operations Engineer

09/2015 to 11/2019

Wunderman Thompson Studios

Dhaka

- **Managed and administered core infrastructure on Amazon Web Services (AWS)**, configuring and maintaining a hybrid environment that included **Windows and Linux servers**, along with database instances.
- **Streamlined the Continuous Integration and Deployment (CI/CD) process** by implementing and managing an automated deployment pipeline using **GoCD**, which **reduced time-to-market for new features by an estimated 40%**.
- **Enhanced security and compliance** across all environments by coordinating and executing periodic **security patch updates** on Windows, Linux, and Database servers across all production and development environments.
- **Owned critical infrastructure services** including the maintenance and troubleshooting of **Active Directory (AD), ADFS, and internal Mail Servers**, ensuring uninterrupted operations and secure access control.
- **Reduced manual operational burden** by identifying and automating repetitive day-to-day tasks using scripting, contributing to increased team efficiency and focusing effort on strategic projects.

IT Operations Engineer

01/2011 to 08/2015

Solution9 Limited

Dhaka

- **Managed and maintained core server infrastructure** across a hybrid environment, specializing in **Linux and Windows** Server administration, ensuring reliable service delivery for both internal and external clients.
- **Oversaw and optimized virtualization infrastructure** by administering **Xen Servers** and managing co-location services, ensuring efficient resource utilization and platform stability.
- **Streamlined operational efficiency** by implementing initial system maintenance and configuration management practices (including software installation and scheduled backups) for all production and development environments.
- **Provided critical Tier 2 support** for technical issues, including network troubleshooting and client support for VoIP software, maintaining service continuity and quick issue resolution.

Certification

HashiCorp Certified: Terraform Associate (003)

https://www.credly.com/badges/04f2fc5e-b604-49a7-b6d2-2313c6c90921/public_url

Certified Kubernetes Administrator (CKA)

https://www.credly.com/badges/fcd57251-62ce-4c37-9cfc-67e566cc0174/public_url

Education Background

MSc: Cyber Security with Professional Practice

University of Wolverhampton

2022

United Kingdom

BSc: Computer Science and Engineering

Ahsanullah University of Science and Technology

2011

Bangladesh
